

Interactive Multimedia Applications 2025/2026

Final Project

Functional Prototyping

This work is individual; the submission includes the report in digital format and the application code. The source code should be included in an online repository, and the repository link should be included in the report. This project must be delivered by June 7th, 2026. Discussions will be between the 16th and 18th of June 2026.

Create a functional prototype of the app you idealized and designed in the 1st and 2nd Lab Projects. Report and justify any changes from your initial prototype versions. You are free to use any development framework, but multiplatform frameworks will be valued. Make and include usability tests of your functional prototype with 5-6 users. As part of the usability tests, you should record and report quantitative data from interaction logs.

Keep the Requirements

Your app must include:

- At least two types of feedback to the user: visual information, text, audio, and haptic/vibration.
- Touch input and at least two types of input: you can use any sensor.

Deliverables

Your report must include

- **Screenshots of your functional prototype**
- **Report and justify any changes from your initial prototype versions**
- **Photos of usability tests with the functional prototype (from 5 to 6 participants – ask permission to take photos)**
- **Descriptive statistics of quantitative data from user testing**
- **Link to an online repository with the source code**
