

Interactive Multimedia Applications 2025/2026

1st Lab Project

Ideation and Paper Prototyping

This work is individual, but it is important to discuss it with your peers. A short report must be submitted via Moodle by March 13th.

App Definition

1. Make a description of the mobile application that you want to develop in the final project of the curricular unit.
2. Make a Web search for 2 similar applications. Make a description of the applications found and enumerate the main differences with respect to the application defined in the previous point.

Tasks

3. Make a list and description of the tasks that you think the user can perform in your application. Attention: it is not about the system features, but about the tasks the user can do.

Requirements

Your app must include:

- At least two types of feedback to the user: visual information, text, audio, and haptic/vibration.
- Touch input and at least two types of input: you can use any sensor.

Deliverables

Your report must include

- Photos of some of your **sketches** (app ideation)
- Photos of a **storyboard** (app ideation)
- Photos of a **paper prototype** (app prototyping)
- Photos of **usability tests with the paper prototype (from 3 to 5 participants – ask permission to take photos)** (app prototyping)
- **Usability tests: use the think-aloud method and include in the report which tasks were asked to participants, as well as what worked and did not work for them.**

NOTE: This is a starting point; please don't stress if things are still fuzzy. At this stage, focus on completing the process, not the final app.
